

SYSTEM AND METHOD FOR ADAPTIVE RESOURCE MANAGEMENT**ABSTRACT OF THE DISCLOSURE**

A system and method for monitoring resource requirements in a computer system and for adding (or subtracting) such resources as required. In a preferred embodiment, the system automatically, without user intervention, makes the resource adjustment when calculations indicate a need for such an adjustment. The system stores historical and statistical data concerning a multitude of parameters and the action taken with respect to the resources reflects a comparison against such stored data.
